

Quarterly Report

Second Quarter 2013

Message from the Chairman of the Board and the President and Chief Executive Officer

Second quarter

For the second quarter of 2013, Hydro-Québec's **net result** was \$464 million, compared to \$386 million in 2012. This \$78-million increase is mainly due to growth in net electricity exports by Hydro-Québec Production.

Summary of operations for the first six months

For the six months ended June 30, 2013, Hydro-Québec posted a **net result** of \$1,824 million, an increase of \$102 million over the \$1,722 million recorded in the same period last year. This increase is also due to growth in net electricity exports.

Result from continuing operations for the first six months

The **result from continuing operations** amounted to \$1,804 million, an increase of \$59 million over the \$1,745 million posted in 2012.

Revenue totaled \$6,835 million, compared to \$6,387 million a year earlier.

In Québec, revenue from electricity sales amounted to \$5,830 million, or \$307 million more than in 2012, mainly because temperatures were close to normal in the first half of 2013, whereas they had been milder in 2012. Higher demand was also a factor, primarily in the residential sector, as were the rate adjustments of April 1, 2012 and 2013.

On markets outside Québec, revenue from electricity sales was \$856 million, compared to \$574 million in 2012. This \$282-million increase resulted from growth in Hydro-Québec Production's export revenue.

Other revenue totaled \$149 million, a \$141-million decrease compared to 2012 that essentially stems from differences in the amounts that Hydro-Québec is entitled to receive from customers or is required to pay to them in connection with such things as revenue variances related to climate conditions, given the mild temperatures in 2012.

**Segmented
operations for the
first six months**

Total expenditure amounted to \$3,821 million, or \$387 million more than in 2012. Current operating expenses decreased by \$23 million from 2012. Electricity and fuel purchases increased by \$301 million due to a \$147-million rise in electricity purchases made by Hydro-Québec Distribution from independent wind power and biomass energy producers, among others, and a \$113-million rise in electricity purchases made by Hydro-Québec Production, associated mainly with trading activities outside Québec. In addition, water-power royalties increased by \$28 million.

Generation

Hydro-Québec Production posted a result from continuing operations of \$1,111 million, compared to \$928 million in 2012. This \$183-million increase is due to growth of \$132 million in net electricity exports and of \$79 million in revenue from electricity sales to Hydro-Québec Distribution, mainly because temperatures were close to normal in the first half of 2013, whereas they had been milder in 2012, and because demand rose in Québec. In addition, electricity purchases from Rio Tinto Alcan decreased by \$61 million. These factors were mitigated by a \$28-million increase in water-power royalties.

Transmission

Hydro-Québec TransÉnergie's result from continuing operations was \$292 million, a \$23-million decrease from 2012 that essentially stems from differences in the amounts that Hydro-Québec is entitled to receive from customers or is required to pay to them in connection with such things as variances in revenue from point-to-point transmission services.

Distribution

Hydro-Québec Distribution posted a result from continuing operations of \$388 million, compared to \$471 million in 2012. Revenue from electricity sales increased by \$273 million on account of three main factors: temperatures that were close to normal in the first half of 2013, whereas they had been milder in 2012; higher demand, primarily in the residential sector; and the rate adjustments of April 1, 2012 and 2013. Other revenue decreased by \$103 million, essentially because of differences in the amounts that Hydro-Québec is entitled to receive from customers or is required to pay to them in connection with such things as revenue variances related to climate conditions, given the mild temperatures in 2012. Moreover, electricity purchases increased by \$216 million, \$147 million of which related to supplies from independent power producers and \$79 million to supplies from Hydro-Québec Production.

Construction

The Construction segment includes activities related to the projects carried out by Hydro-Québec Équipement et services partagés and by Société d'énergie de la Baie James (SEBJ).

The volume of activity at Hydro-Québec Équipement et services partagés and SEBJ totaled \$1,060 million, compared to \$916 million in 2012. Projects under way for Hydro-Québec Production include ongoing construction at the Romaine jobsites. Work in progress for Hydro-Québec TransÉnergie includes expansion of the transmission system in the Minganie region, the addition of a 735/315-kV section and related work at Bout-de-l'Île substation as well as various projects stemming from continued investment in asset sustainment.

Investment

In the first half of 2013, Hydro-Québec invested \$1,802 million in property, plant and equipment and intangible assets, compared to \$1,614 million in 2012. As expected, a large portion of this amount was devoted to the major hydroelectric projects of Hydro-Québec Production, especially ongoing construction at the Romaine jobsites.

Hydro-Québec TransÉnergie continued investing in its transmission system. As part of its growth projects, work progressed on Romaine-2 substation and the 735-kV line that will connect it to Arnaud substation. The division also carried out maintenance and improvement activities to ensure the long-term operability of its transmission assets.

Hydro-Québec Distribution kept up investments to handle the growth of its Québec customer base and to ensure the long-term operability of its facilities.

Pierre Karl Péladeau

NOTES TO CONSOLIDATED FINANCIAL STATEMENTS (UNAUDITED)

For the three- and six-month periods ended June 30, 2013 and 2012

Amounts shown in tables are in millions of Canadian dollars.

Note 1 Basis of Presentation

The Canadian Accounting Standards Board has authorized rate-regulated entities to defer the adoption of International Financial Reporting Standards until January 1, 2015. Since Hydro-Québec was entitled to exercise this deferral right, it opted to prepare its 2013 and 2012 financial statements in accordance with Canadian generally accepted accounting principles as set forth in Part V of the *Canadian Institute of Chartered Accountants Handbook*, "Pre-Changeover Accounting Standards."

Hydro-Québec's consolidated financial statements also reflect the decisions of the Régie de l'énergie (the "Régie"). These decisions may affect the timing of the recognition of certain transactions in the consolidated operations, resulting in the recognition of regulatory assets and liabilities, which Hydro-Québec considers it is likely to recover or settle subsequently through the rate-setting process.

The quarterly consolidated financial statements, including these notes, do not contain all the required information regarding annual consolidated financial statements and should therefore be read in conjunction with the consolidated financial statements and accompanying notes in Hydro-Québec's *Annual Report 2012*.

The accounting policies used to prepare the quarterly consolidated financial statements are consistent with those presented in Hydro-Québec's *Annual Report 2012*.

Hydro-Québec's quarterly results are not necessarily indicative of results for the year on account of seasonal temperature fluctuations. Because of higher electricity demand during winter months, revenue from electricity sales in Québec is higher during the first and fourth quarters.

Note 2 Effects of Rate Regulation on the Consolidated Financial Statements

Distribution

In decision D-2013-043 of March 22, 2013, the Régie authorized an across-the-board increase of 2.41% in Hydro-Québec's electricity rates, effective April 1, 2013. The authorized return on the rate base was set at 6.38%, assuming a capitalization with 35% equity.

In decision D-2013-037 of March 12, 2013, the Régie asked the Distributor to recognize in a separate account any variance between the actual amount of the expense related to the activities of the Bureau de l'efficacité et de l'innovation énergétiques and the amount provided in rate cases for this item. As at June 30, 2013, no amount had been recognized in this account.

Note 3 Revenue

	Three months ended June 30		Six months ended June 30	
	2013	2012	2013	2012
Electricity sales ^a	2,819	2,535	6,686	6,097

Net investment income	6	6	13	13
	76	82	154	160
	602	598	1,210	1,208

Note 6 Discontinued Operations

In September 2012, the decision was made to abandon the project to refurbish Gentilly-2 nuclear generating station and to terminate all nuclear power operations. The facility continued to generate electricity until the end of 2012, in accordance with the terms and conditions of its operating licence, after which time Hydro-Québec started to prepare it for dormancy with a view to dismantling it around the year 2060.

The abandonment of the refurbishment project led to the write-off of the property, plant and equipment under construction for this project and to the impairment of the assets related to the facility.

For comparison purposes, Gentilly-2's operating result is presented under discontinued operations in the consolidated statements of operations for all periods concerned.

Note 7 Supplementary Cash Flow Information

Highlights

Distribution

2014–2015 rate adjustment application

In August 2013, Hydro-Québec Distribution filed an application with the Régie de l'énergie for a 3.4% adjustment in electricity rates, effective April 1, 2014. The main reasons for the adjustment are the costs of purchasing power from the new wind farms and indexing the price of the heritage pool. However, Hydro-Québec will offset some of these additional costs with \$160 million in efficiency gains, which is why the requested rate adjustment is only 3.4%.

More specifically, there are four factors behind the requested adjustment. First, the commissioning of new wind farms, under purchasing programs decreed by the Québec government, is putting upward pressure on electricity supply costs for the Québec market (+2.7%). Second, the heritage pool, which covers over 90% of Québec's electricity needs, will be indexed as of 2014, as provided by the *Act respecting the Régie de l'énergie* (+0.8%). Third, additions to the transmission and distribution

systems, made necessary by the growth in residential and commercial demand throughout Québec and approved by the Régie de l'énergie, are contributing to the increase in costs (+1.4%).

Efficiency gains of \$160 million will partly offset (-1.5%) the first three factors, thereby limiting the requested adjustment to 3.4%.

If Hydro-Québec's application is approved by the Régie de l'énergie, the rate adjustment will add about \$1.70 to the monthly electricity bill for an apartment, \$4.30 for a small house, \$6.10 for a midsize house and \$7.87 for a big house.

For residential customers, Hydro-Québec's rates will still be among the lowest in Canada and North America.

Under the *Act respecting the Régie de l'énergie*, indexation of the heritage pool does not affect industrial customers, so their increase would be 2.6%.

Energy efficiency

Hydro-Québec Distribution's proposed budget for energy efficiency programs and activities is \$135 million. This amount will help generate energy savings of 464 GWh in 2014, bringing the cumulative total to almost 8 TWh.

Support for low-income customers

Hydro-Québec Distribution will maintain its programs for low-income customers. It is proposing a budget of \$17.8 million, mainly to help customers who have personalized arrangements to pay their electricity bills and arrears.

Hydro-Québec Distribution is also proposing to invest close to \$10 million in energy efficiency programs for those customers.

Approval process

Public hearings on the rate application will enable representatives of all interested parties to review and debate the proposal. The Régie de l'énergie will then issue a ruling in early 2014, with the new rates taking effect April 1, 2014. By law, it is the Régie de l'énergie that sets Québec electricity rates.

Rate of return and surplus-sharing mechanism

In a separate application, Hydro-Québec has asked the Régie de l'énergie to increase its rate of return to bring it line with that of similar companies in Québec and elsewhere in North America.

This application includes a proposed sharing mechanism that would enable customers to benefit from Hydro-Québec's cost reductions.

The Régie de l'énergie's ruling on this application is expected in early 2014. The revision of the return rate as requested by Hydro-Québec could add approximately 2% to electricity rates as of 2014.

Transmission

2013 and 2014 rate application from the Transmission Provider

In August 2013, Hydro-Québec TransÉnergie filed its 2013 and 2014 rate application with the Régie de l'énergie. This application seeks the approval of revenue requirements and changes to transmission service rates. The projected revenue requirements amount to \$2,924.7 million for 2013 and \$3,052.9 million for 2014. The revenue requirements approved by the Régie de l'énergie for 2012 totaled \$2,991.6 million.

**Sustainable
development**

A first-place finish for Hydro-Québec's sustainability reporting

In April 2013, the independent organization CorporateRegister.com announced the results of the competition for its CR Reporting Awards, the only global annual awards for corporate responsibility reporting. Hydro-Québec's *Sustainability Report 2011* was the winner in the "Best Carbon Disclosure" category.
